Introduction to Public Health in Pharmacy This comprehensive, first-of-its-kind title is an indispensable resource for pharmacists looking to learn or improve crucial patient assessment skills relevant to all pharmacy practice settings. Pharmacists' role as health care practitioners is evolving as they are taking a more active part in primary patient care -- helping patients manage their medications and diseases, providing patient education, and, in some jurisdictions, prescribing and adapting medications. To perform their day-to-day duties, pharmacists are best-served using a framework called the patient care process. This framework involves three steps; patient assessment; care plan development and implementation; and monitoring and follow up. Organized in four parts, this practical book begins with introductory chapters regarding the basics of patient assessment and the patient care process. Part II includes a detailed assessment of common symptoms encountered by pharmacists. Part III discusses assessment of patients with various chronic illnesses. Part IV addresses select specialized topics and assessment considerations. An invaluable contribution to the literature, Patient Assessment in Clinical Pharmacy: A Comprehensive Guide will be of great benefit to pharmacists, regardless of their practice setting, and to pharmacy students as well.

Skills for Pharmacists Pharmacists are on the frontlines of public health. Their public-facing roles uniquely position them to identify and address emerging disease challenges, discrepancies in health literacy, and barriers to treatment in the communities they serve. In today's interconnected world, the clients consulting a neighborhood pharmacist are just as likely to hail from across an ocean as they are from around the corner. Fittingly, Introduction to Public Health in Pharmacy, Second Edition takes an approach that is both global and local. Macro-level examinations of health care systems and funding mechanisms around the world and advice for culturally competent, client-centered communication regarding nutrition and proper self-administration of medications encapsulate pharmacists' dual roles as guardians of global public health and providers of personalized care. Written in accordance with the latest guidelines from the Center for the Advancement of Pharmacy Education, Introduction to Public Health in Pharmacy, Second Edition offers an accessible introduction for pharmacy students and a comprehensive refresher for pharmacists already in practice.

Communication Skills in Pharmacy Practice The outbreak of the Coronavirus in early 2020 resulted in unprecedented changes to health professions education. The pervasive stay-at-home orders resulted in faculty, who were trained for preparing the next generation of health professionals in a traditional learning environment, throwing out their lesson plans and starting anew. New approaches to teaching and learning were created quickly, and without the typical extensive planning, which introduced several challenges. However, lessons learned from these approaches have also resulted in increased technology adoption, innovative assessment strategies, and increased creativity in the learning environment. The Handbook of Research on Updating and Innovating Health Professions Education: Post-Pandemic Perspectives explores the various teaching and learning strategies utilized during the pandemic and the innovative approaches implemented to evaluate student learning outcomes and best practices in non-traditional academic situations and environments. The chapters focus specifically on lessons learned and best practices in health professions education and the innovative and exciting changes that occurred particularly with the adoption and implementation of technology. It provides resources and strategies that can be implemented into the current educational environments and into the future. This book is ideal for inservice and preservice teachers, administrators, teacher educators, practitioners, medical trainers, medical professionals, researchers, academicians, and students interested in curriculum, course design, development of policies and procedures within academic programs, and the identification of best practices in health professions education.
