Martin Heidegger (Stanford Encyclopedia of Philosophy)

Martin Heidegger (1889-1976) was a German philosopher known for his significant contributions to the fields of ontology and metaphysics. He is considered one of the most influential philosophers of the 20th century. His work on the concept of Dasein, or being-in-the-world, has had a profound impact on the development of existentialism and phenomenology. Heidegger's philosophical approach has been characterized by a critical examination of the nature of Being and the human condition.

Others argue that Heidegger uses authenticity in both evaluative-normative and purely descriptive senses. In the descriptive use of the term, inauthenticity is simply the default condition of everyday life, in which our self-relations are mediated by others.
