MIG and flux cored weld results achieved with the world’s most utilized welding equipment are frequently influenced by weld sales advice. This 600 plus page book has been called the MIG bible by some readers. It’s the most comprehensive book ever written on managing the MIG process. The book covers all aspects of controlling both the MIG and flux cored process. A MANAGER OR ENGINEER DOES NOT REQUIRE THE ABILITY TO WELD; HOWEVER THEY SHOULD HAVE THE FUNDAMENTAL PROCESS KNOWLEDGE OF WHAT MAKES A GOOD MIG OR FLUX CORED WELD. WHEN A MANAGER OR ENGINEER understands how sales influence and hype effects the weld shop they are well on their way to weld process management. In the MIG Management book you will find: Extensive data on MIG gas selection, “without sales input”. Over 100 pages on the problems with the pulsed process. How to establish effective weld process controls for robot cells. How to use special techniques to increase robot weld speeds. How to optimize manual and robot weld deposition rates. How to control sheet metal welds in automotive plants. How to best utilize MIG and flux cored for pipe welds. All this along with a unique simple method for controlling weld costs. These are just a few of the important topics. Without question this is the most practical and comprehensive book you will ever find on managing the MIG process.

A range of factors are all combining to propel input cost inflation. Higher international logistics costs, returning demand from industry workload, and higher global metals prices are some of the ingredients to quicker building cost inflation. Whilst some EU materials exporters to the UK are adjusting to Brexit, other EU exporters — initially smaller or specialist firms hit proportionally harder — are now deciding not to supply the UK at all, because the additional red tape involved makes it not commercially viable. If this trend replicates across the whole EU to UK supply chain, visible disruption and higher prices are likely until other sources of supply begin to increase in volume and step in to address these supply issues. Among other exporters continuing to supply the UK, significant price increases are being applied to cover the permanent Brexit non-tariff barriers and additional administrative processes. Today, with a bit of investment and practice, farmers can safely and efficiently make their own repairs to metal equipment and structures. Farm Welding begins with chapters on setting up a home shop specifically for farm-welding needs, as well as welding safety and the different welding processes. While the book is largely devoted to oxyacetylene gas and arc welding, the methods most often used for heavy-duty repairs and fabrication on the farm, wire-feed MIG welding for soft metals is also covered.

Strong output demand over the last year has stretched the industry. The issues are being felt by all firms across the delivery chain – from clients to subcontractors. Capacity constraints almost always manifest themselves in prices. Increased tender prices have become the primary symptom of these supply-side issues. The main driver of new work output growth over the last 18 months is slowing. Both the public and private housing sectors are quickly reversing all of their recent upward trends when looked at on a yearly growth basis. The counterpoint to this is that the yearly growth figures are still positive, meaning that new work continues to flow.
