Annual Review of Nursing Research, Volume 10, 1992 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Speaking of Nursing-- Suitable for those sitting Paper 1 of the MRCGP Written examination. Paper 1 comprises 12 questions, featuring multiple essay questions (MEQs) and critical appraisal style questions to be answered in 3.5 hours.

Primary Care Pediatrics for the Nurse Practitioner Advanced Practice in Nursing and the Allied HealthProfessions enables nurses and members of allied health professions to effectively diagnose and treat patients, in a widevariety of settings. It is especially relevant in regions where access to other health providers is limited. A Selected Bibliography on Nurse Practitioners and Physician Assistants Recipient of the AJN Book of the Year Award for the 2nd and 3rd Editions! Third Edition named a Doody's Core Title As the Advanced Practice Registered Nurse (APRN) role continues to expand in today's health care environment, APRNs are more frequently tasked with quantifying, evaluating, and improving their individual care processes, as well as demonstrating the impact of their care. Revised to provide APRN students and educators, practicing APRNs, and nursing administrators with the most up-to-date information on outcome assessment, the fourth edition of this award-winning text is still the only nursing resource to exclusively focus on outcome assessment. Written by expert practitioners, educators and researchers, this fourth edition continues to analyze the foundations of outcome assessment, provide guidelines for selecting assessment instruments and measuring results, discuss design and implementation challenges in outcomes assessment, and provide an unequalled wellspring of information that will help APRNs to increase their skill level and enhance their professional practice role. New to this edition, additional sections focus on practice specific quality
metrics for demonstrating APRN impact, and provide information on a national collaborative launched specifically to showcase outcomes of APRN-led initiatives as part of the Choosing Wisely Campaign. New to the Fourth Edition: Expanded coverage of DNP impact on outcomes Complete updates on practice specific outcomes for all clinical areas of APRN practice including nurse practitioner, clinical nurse specialist, certified registered nurse anesthetists, and certified nurse midwife. Instructor Manual including algorithms and teaching tools

Key Features: Examines in depth the foundations of outcome assessment Addresses specialty areas of APRN practice and specialty-specific considerations for outcome evaluation Provides guidelines for selecting assessment instruments and measuring the results Describes design and implementation pitfalls Helps APRNs to increase skill level regarding evaluation of outcomes

Nurse Staffing Methodology Nurses make up the largest segment of the health care profession, with 3 million registered nurses in the United States. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and provide a continuum of services, including direct patient care, health promotion, patient education, and coordination of care. They serve in leadership roles, are researchers, and work to improve health care policy. As the health care system undergoes transformation due in part to the Affordable Care Act (ACA), the nursing profession is making a wide-reaching impact by providing and affecting quality, patient-centered, accessible, and affordable care. In 2010, the Institute of Medicine (IOM) released the report The Future of Nursing: Leading Change, Advancing Health, which made a series of recommendations pertaining to roles for nurses in the new health care landscape. This current report assesses progress made by the Robert Wood Johnson Foundation/AARP Future of Nursing: Campaign for Action and others in implementing the recommendations from the 2010 report and identifies areas that should be emphasized over the next 5 years to make further progress toward these goals.

The Research Process in Nursing This book serves as a comprehensive reference for the basic principles of caring for older adults, directly corresponding to the key competencies for medical student and residents. These competencies are covered in 10 sections, each with chapters that target the skills and knowledge necessary for achieving competency. Each of the 45 chapters follow a consistent format for ease of use, beginning with an introduction to the associated competency and concluding with the most salient points for mastery. Chapters also includes brief cases to provide context to the clinical reasoning behind the competency, strengthening the core understanding necessary to physicians of the future. Written by expert educators and clinicians in geriatric medicine, Geriatric Practice is key resource for students in geriatric medicine, family and internal medicine, specialties, hospice and nursing home training, and all clinicians studying to work with aging patients.

The Journal of Long Term Care Administration This report is the twelfth assessment of the National Institutes of Health National Research Service Awards program. The research training needs of the country in basic biomedical, clinical, and behavioral and social sciences are considered. Also included are the training needs of oral health, nursing, and health services research. The report has been broadly constructed to take into account the rapidly evolving national and international health care needs. The past and present are analyzed, and predictions with regard to future needs are presented.

Role Development for Doctoral Advanced Nursing Practice "Primarily, the book covers different global health partnerships and initiatives, focusing on what works/what doesn't work and providing guidance for future partnerships. This is ideal for readers who focus their work in this area." --Doody's Medical Reviews This innovative text for graduate and undergraduate nursing students fills a void in global health nursing literature by providing essential tools and strategies for building and sustaining productive international partnerships. Based on the premise that partnership is paramount for sustainable outcomes, the book demonstrates how nurses can build sustainable health programs that will improve health outcomes worldwide. Written by two highly experienced global nurses, the book offers expert guidance gained from many years of successful involvement in international collaboration that is supported by detailed real-life examples. It will be of particular interest to nurse educators who undertake projects with their students to ensure that both students and host partners are able to meet their collaborative goals. Additionally, the text provides information that will help nurse educators to perpetuate a successful educational program even after they depart or funding ends. Case studies from many different perspectives demonstrate positive change effected by nurses working across international boundaries and within their own countries. The text builds on the Conceptual Framework for Partnership and Sustainability in Global Health Nursing developed by Leffers and Mitchell (2010). Additionally, the book reflects the focus on global health competence for nurses in the future (ICN, 2011) as well as that of the American Academy of Nursingis recently established committee on Global Health. Advancing the Nation's Health Needs Functioning as both a graduate textbook and a professional resource, Role Development for Doctoral Advanced Nursing Practice explores the historical and evolving role of the doctorally-prepared Advanced Practice Registered Nurse (APRN). Because the role of the DNP graduate is evolving, the primary authors and contributing authors of this text present positions and reflective responses that represent a diverse range of current views on the DNP role and the diverse 'ideas' of what the role of the doctorally-prepared APRN should be. This is also the first text to market that exclusively examines the evolving and expanding role functions of the DNP graduate. Too often, nursing texts offer the sole view of the author. This one uniquely does not. The highlight of this text is the two-part chapter organization that presents the chapter content followed by a Reflective Response, which is commentary that may counter or support the opinions of the chapter author. Each Reflective Response is written by well-known DNP leaders representing the diverse roles and experience of academics, administrators and practitioners. This innovative chapter presentation is bound to provide for more stimulating classroom discussion. This work is stimulating and possibly provocative, but in the end is a well-rounded, landmark presentation of a wide range of topics surrounding education of the DNP, the core competencies and the unfolding DNP role development. It is a 'must have' text for use in all DNP role development courses and courses covering contemporary DNP degree issues! Each of the textbook's sections thoroughly covers important aspects of role development: Section I: provides background information on the evolution of the DNP degree; essential content on role theory; what nursing "roles" are and how they evolved; and a discussion of how masters versus doctoral level advanced nursing practices differ Section II: focuses on the four basic roles of the DNP graduate which currently predominate: practitioner, clinical executive, educator, and clinical trials research scientist, as well as the role of the clinical scholar which each graduate is expected to be Section III: covers the diverse skills that comprise the doctoral APRN role; including leadership content, negotiation skills, and leveraging technology to support doctoral advanced level practice; debate over the DNP Exam; discussion of DNP grads using the title "Dr"; and how the doctoral APRN can use their new competencies to function at a higher level.

Primary Care Now in its second edition, Canadian Perspectives on Advanced Practice Nursing provides a comprehensive and uniquely Canadian review of the roles of clinical nurse specialists and nurse practitioners, the two streams of advanced practice nursing (APN) in the country. With contributions from notable professionals and academics of the field, the text explores the history and evolution of APN in Canada, from its rural and remote outpost beginnings to the present, and proposes a vision for its future within the health care system. Key issues are examined in relation to economic, educational, legislative, political, regulatory, and social environments that have shaped the continued integration of APN roles across the country. Additionally, the contributors apply the Canadian Nurses Association’s pan-Canadian framework and role competencies to real clinical cases. Speciality roles, including geropsychiatry, ambulatory care, and neonatal, are also examined. New to this edition are chapters that focus on the unique challenges of developing APN roles in Quebec; the social determinants of health of Indigenous, inner-city, rural and remote, LGBT2SQ, and refugee and migrant populations in Canada; and other critical issues, such as performance assessment and global perspectives. Thoroughly updated, this second edition of Canadian Perspectives on Advanced Practice Nursing is a must-read for those in the nursing profession, especially students in nursing programs.

Better Health for Our Children: Background papers Ask for a definition of primary care, and you are likely to hear as many answers as there are health care professionals in your survey. Primary Care fills this gap with a detailed definition already adopted by professional organizations and praised at recent conferences. This volume makes recommendations for improving primary care, building its organization, financing, infrastructure, and knowledge base—as well as developing a way of thinking and acting for primary care clinicians. Are there enough primary care doctors? Are they merely gatekeepers? Is the traditional relationship between patient and doctor outmoded? The committee draws conclusions about these and other controversies in a comprehensive and up-to-date discussion that covers The scope of primary care. Its philosophical underpinnings. Its value to the patient and the community. Its impact on cost, access, and quality. This volume discusses the needs of special populations, the role of the capitation method of payment, and more. Recommendations are offered for achieving a more multidisciplinary education for primary care clinicians. Research priorities are identified. Primary Care provides a forward-thinking view of primary care as it should be practiced in the new integrated health care delivery systems—important to health care clinicians and those who train and employ them, policymakers at all levels, health care managers, payers, and interested individuals.

Research Methods for Nurses and Midwives valuable way of presenting information within the book and purposely sought. It is hoped that exposure to individual chapters within the book will encourage readers to consider issues and problems from perspectives other than the ones with which they are familiar and perhaps comfortable. The reader is then responsible for the consideration, adoption or challenge to the content of any chapter. During the process of exploration of content, reference should always be made to its potential place within clinical practice and its influence upon the delivery of patient and family care. Although it is acknowledged that each A and E department is different and that the environment and local resources affect the translation of theory into practice, questioning and subsequent challenge of the environment, work issues and ideas should help the reader to widen the debate about nursing in A and E and its anticipated growth into the next century. The intended outcome of such analysis by the reader may be to challenge practice. Alternatively information presented within the book may support or enhance work currently being undertaken within a number of A and E departments. With reference to the format, the book is not intended to be read from cover to cover. Instead the reader will find the book a valuable source of information that can be dipped into when required, a book where the sampling of arguments put forward by various contributors can be considered.

It includes an introduction to nursing homes, medication management, practical health promotion/disease prevention, and management of common clinical conditions specific to the skilled and long term care nursing home settings. It will also address important topics such as elder abuse, legal issues, reimbursement, and regulatory issues. Subjects covered are pertinent to everyday practice and this text is useful in graduate programs for nurse practitioners and clinical nurse specialists as well as for physician's assistant (PA) students.

Studies & Papers Statement of Problem: Firearm violence is a growing concern in the United States. The American Association of Nurse Practitioners (2018) addressed concerns for the growing issue of firearm violence and the need for more research. Quality research focusing on family nurse practitioners and firearm counseling is lacking. With current and future nurse practitioners continuing to move into the role of primary care provider, it is important to initiate discussion among all disciplines and seek out support from professional nursing organizations for future research exploring firearm counseling. Sources of Data: Data was collected from a census sample of all family nurse practitioner students currently enrolled at California State University San Marcos. Students completed a paper survey that included demographic data, and the Modified Price Questionnaire (Price et al., 2013) Conclusions Reached: This was a descriptive study that explained family nurse practitioner students' attitudes about firearm counseling to their patients. In addition, this study explained students' attitudes about firearm violence in the U.S., barriers to discussing firearm issues with their patients, beliefs about their roles in discussing firearms, and their confidence in firearm counseling. This study found a statistical significance in the relationship between students that had begun clinical fieldwork and their belief that patients may perceive discussing firearm issues as an intrusion of privacy.
Nurse Practitioners and the Expanded Role of the Nurse This early volume in the long-running series focuses primarily on community issues. As in all volumes in the series, leading nurse practitioners provide students, researchers, and clinicians with the foundations for evidence-based practice and further research.

Advanced Practice in Nursing and the Allied Health Professions This book focuses on an organization, the U.S. Army Nurse Corps, which the author has been privileged to be affiliated with – in one way or another – for the greatest part of her adult life. As an active duty officer, the author had first-hand knowledge about the Army Nurse Corps inner workings and spent the last years of her Army career (from 1992) researching and writing the Corps history. One of her goals in researching and writing this history was to intrigue and provide a sense of gratification for the reader. After the conclusion of the Vietnam War, several wide-ranging and significant changes exerted myriad effects on the Army Nurse Corps. The most influential of these phenomena included the dismantling of the Selective Service System, the reorganization of the Army, the launch of the Health Services Command (HSC), the opening of the Academy of Health Sciences, the transformation of the Office of the Army Surgeon General, the inauguration of improvements in the Army Reserve and National Guard, and the evolution in the roles and status of women.
