In the Rules, 21NCAC36.0810(b)(1)(2) and 21 NCAC32M.0110(b)(1)(2) “Quality Assurance Standards for a Collaborative Practice Agreement,” the Collaborative Practice Agreement shall be agreed upon and signed by both the primary supervising Physician and the Nurse Practitioner, and maintained in each practice site.

Oct 26, 2018 · Primary care systems are optimized when multidisciplinary teams of health professionals work together to provide integrated care. However, it is clear that many primary care systems remain a long way from truly collaborative practice. Additionally, it is important to understand the impact of individual health professionals on patient outcomes.

The Comprehensive Primary Care (CPC) initiative is a four-year multi-payer initiative designed to strengthen primary care. Since CPC’s launch in October 2012, CMS has collaborated with commercial and State health insurance plans in seven U.S. regions to offer population-based care management fees and shared savings opportunities to participating primary care practices.

The MARAM Collaborative Practice training focuses on both collaborative practice and foundational aspects of MARAM that enable collaboration. The training enables practitioners to contribute to risk assessment and collaborate for ongoing risk management, through respectful and sensitive engagement with victim's/s survivors, information sharing.

Collaborative Care (CoCM) is a specific type of integrated care developed at the University of Washington that treats common mental health conditions such as depression and anxiety that require systematic follow-up due to their persistent nature. Based on principles of effective chronic illness care, Collaborative Care focuses on defined patient populations tracked in a registry.

The Collaborative Care Model seeks to impact the clinical outcomes of patients who present with depression in primary care. In this model a consulting psychiatrist and care manager is added to the care team to manage a registry (list) of patients from a practice who have been screened as needing support for depression using the PHQ-9 (a standard depression screening tool).
