The use of operating theatres in Northern Ireland Health and Personal Social Services

In this book, Erik M. Francis explores how one of the most fundamental instructional strategies—questioning—can provide the proper scaffolding to deepen student thinking, understanding, and application of knowledge. You’ll learn: *Techniques for using questioning to extend and evaluate student learning experiences. *Eight different kinds of questions that challenge students to demonstrate higher-order thinking and communicate depth of knowledge. *How to rephrase the performance objectives of college and career readiness standards into questions that engage and challenge students. Francis offers myriad examples of good questions across content areas and grade levels, as well as structures to help teachers create and use the different kinds of questions. By using this book to fine-tune your approach to questioning, you can awaken the spirit of inquiry in your classroom and help students deepen their knowledge, understanding, and ability to communicate what they think and know.

False Premise, False Promise

This book examines and engages with the ambivalence of digitization, illuminating the diverse ways in which researchers approach, negotiate, understand and interpret objects and practices of digital research.
The Handbook of Clinical Trials and Other Research

Research can seem difficult to get to grips with. However, at the heart of this book is the view that research is essentially a simple activity, the principles of which can be readily understood by students new to the subject. Each chapter guides the reader to uncover the ‘mysteries’ of research, exposing each aspect in turn, while demonstrating how research in healthcare is a practical activity, orientated directly to patient care. Fully updated to refer to the latest sources and studies, this book now includes: Two new chapters on qualitative research, clearly explaining what it is and how to do it; A comprehensive glossary of qualitative and quantitative terms to demystify tricky terminology; An appendix of statistical tests, explaining the procedures for each; Many new examples from practice, applying the theory to a wide range of scenarios from across the healthcare professions. This book is designed for all students of nursing and allied health professions studying research for the first time. Research is illustrated through examples of activities familiar to students from their daily lives, helping to build confidence in undertaking research and evidence-based practice.

Health Policy in Britain

This book aims to comprehensively address several modern concepts and practices in health care marketing not sufficiently addressed by existing literature. This includes the integrated nature of health care marketing, operations management, IT and human resource management; increased use of digital technology and social media; emphasis on enhancing customer-patient experience when strategizing and implementing health care marketing; application of modern services marketing concepts to health care marketing mix, among others. It also addresses recent changes in the U.S. health care industry. Some key issues covered are the increase in federal and state government involvement and oversight of health care delivery; increase in laws and regulations affecting health care management and marketing; growth of specialized health care markets such as Medicare, Medicaid and Affordable Care Act; globalization of health care and greater focus on legal and ethical health care marketing practices. Modern Health Care Marketing is an essential read to understand the integrated nature of health care marketing in the technologically driven, customer/patient-focused and globalized environment. It is also a useful reference for professionals to pick up best practices on addressing challenges faced in the modern health care industry.

The Question

The Department of Health introduced a target to reduce MRSA across all NHS trusts by 50 per cent by 2008 and C. difficile by 30 per cent by 2010-11. MRSA had been reduced by 57 per cent by the end of March 2008 and C. difficile by 41 per cent. While a quarter of trusts have reduced MRSA by more than 80 per cent, in 12 per cent of trusts there has been an increase in MRSA infections. Twenty-nine per cent of trusts have reduced C. difficile by more than 50 per cent, but in 19 per cent of hospital trusts the numbers of C. difficile infections have increased. Since the introduction of the targets, the Department has spent some £120 million tackling healthcare associated infections. There have also been unquantifiable administrative costs and local expenditure on the drive to reduce infection rates. These initiatives have led to savings on treatment of between £141 million and £263 million, as well as reducing discomfort, disability and, for some, death that might have been caused by these avoidable infections. There has also been a perceptible change in trust leadership on tackling infections. The impact has not, however, been the same in all trusts or for other infections. Following the Department’s intervention to improve recording on death certificates where MRSA or C. difficile was the underlying cause or a contributory factor, in 2007 around 9,000 people were reported as having died in such circumstances. There is still no national information on deaths from other healthcare associated infections such as urinary tract infections and pneumonia and bloodstream infections due to other causes may be increasing.

By exploring the design process this book looks at the relationship between the architectural and medical professions to see how the next wave of Government health policies can be best provided for. The aim is to raise the quality of health buildings in the primary care sector. Greater flexibility will be required as the medical profession moves towards a pro-active attitude to Healthy Living Centres rather than the traditional reactive treatment to cure disease. This is a hands-on ‘how to do it’ guide to satisfy changing policy objectives, offering an up to date methodology to encourage a holistic approach to health care buildings which will be of interest to both architectural and medical professionals.

**Healthy Living Centres**

American health care is at a crossroads. Health spending reached $3.5 trillion in 2017. Yet more than 27 million people remain uninsured. And it’s unclear if all that spending is buying higher-quality care. Patients, doctors, insurers, and the government acknowledge that the healthcare status quo is unsustainable. America’s last attempt at health reform – Obamacare – didn’t work. Nearly a decade after its passage in 2010, Democrats are calling for a government takeover of the nation’s healthcare system – Medicare for All. The idea’s supporters assert that health care is a right. They promise generous, universal, high-quality care to all Americans, with no referrals, copays, deductibles, or coinsurance. With a sales pitch like that, it’s no wonder that seven in ten people now support Medicare for All. Doctors, especially young ones, are coming around to the idea of single-payer, too. Democrats, led by the progressive wing of the party, hope to capitalize on this enthusiasm. In 2017, they introduced companion legislation in the House and Senate that would establish Medicare for All. They have already promised to do the same when the next Congress convenes in 2019. More than 70 House Democrats have joined a new Medicare for All Caucus. Senator Bernie Sanders is effectively already on the presidential campaign trail, making his case for single-payer. If Democrats take the White House and Senate in 2020, and hold onto the House, a Medicare for All bill could be among the first pieces of legislation presented to the new president for a signature. In this book, Sally C. Pipes, a Canadian native, will make the case against Medicare for All. She’ll
explain why health care is not a right -- and how progressives pressing for single-payer are making a litany of promises they can't possibly keep. Evidence from government-run systems in Canada, the United Kingdom, and other developed countries proves that single-payer forces patients to withstand long waits for poor care at high cost. First, she'll unpack the Medicare for All plans under consideration in Congress. She'll explain how radical they truly are. Medicare for All will not save $5 trillion, as some of its proponents claim. It will cost about $32 trillion over 10 years, according to analyses from the Urban Institute and the Mercatus Center. It will outlaw private health insurance. It will raise taxes by trillions of dollars. It will cut pay for doctors to the rates paid by Medicare and thereby exacerbate our nation's shortage of physicians. And it will ration care. Then, Sally will detail the horrors of single-payer. She'll start in Canada, whose single-payer system most closely resembles the one progressives have in mind for the United States. Analyses of the government-run systems in the United Kingdom and a few other developed countries will follow, with particular focus on the problems that these systems pose for patients and doctors. To substantiate her indictment of single-payer, Sally will marshal both quantitative and qualitative evidence. She'll highlight how Americans fare better than their peers in Canada and the United Kingdom on the health outcomes that are directly linked to the quality of a healthcare system, including survival rates for patients with cancer and cardiovascular issues. She'll also explain why the health outcomes where the United States performs poorly relative to other nations, like infant mortality and life expectancy, tell us little about our healthcare system. Sally will pepper her text with heart-wrenching stories of the human costs of single-payer -- of people who were injured, were forced to remain in pain, or even died because their government-run healthcare system delayed or denied care. Too often, evangelists for free markets limit their arguments to facts and statistics -- and fail to appeal to the public's emotions. Sally will feature the stories of individuals and families who have been victims of single-payer systems. These vignettes will help drive home the truth about single-payer -- and why it must not come to the United States. She'll conclude with her vision for delivering the affordable, accessible, quality care the American people are looking for.

American Jewish Year Book 2020

Throughout the world, governments are restructuring social and welfare provision to give a stronger role to opportunity, aspiration and individual responsibility, and to competition, markets and consumer choice. This approach centres on a logic of individual rational action: people are the best judges of what serves their own interests and government should give them as much freedom of choice as possible. The UK has gone further than any other major European country in reform and provides a useful object lesson. This book analyses the pressures on social citizenship from changes in work and the family, political actors, population ageing, and the processes within government in the relentless international process of globalization that have shaped the response. It examines the various social science approaches to agency and argues that the logic of rational action is able to explain how reciprocity arises and is sustained but offers a weak foundation for social inclusion and social trust. It will only sustain part of the welfare state. A detailed assessment of empirical evidence shows how the outcomes of the new policy framework correspond to its theoretical strengths and limitations. Reforms have achieved considerable success in delivering mass services.
efficiently. They are much less successful in redistributing to more vulnerable low income groups and in maintaining public trust in the structure of provision. The risk is that mistrustful and disquieted voters may be unwilling to support high spending on health care, pensions and other benefits at a time when they are most needed. In short, the reform programme was undertaken for excellent reasons in a difficult international context, but risks throwing the baby out with the bathwater.

**State of Healthcare 2008**

It also includes material on research ethical committees, and incorporates recent international developments such as the EU Clinical Trials Directive. The research methods and issues identified are universal, crossing countries and disciplines. It can be used as a reference tool, an introduction to learning about clinical trials, as a refresher to those involved in clinical research, or to check that the correct terms are being used in the correct context. Readily available references are included that can be used by the reader to further support their own work.

**Genomic medicine**

The 165 NHS acute and Foundation hospital trusts in England spend over £4.6 billion a year on the procurement of medical supplies and other types of consumable goods. Each trust controls its own purchasing and can purchase consumables in various ways: dealing direct with suppliers; through the national supplies organisation, NHS Supply Chain; or via the regional Collaborative Procurement Hubs. They can also choose to join other trusts in collaborative purchasing arrangements for particular localities or types of supplies. The Department sees the future for NHS procurement as a 'pyramid' structure with national, regional and local procurement of different types of goods, as appropriate to the products and the supplier markets. However, this theoretical model does not reflect the current complex reality, with a profusion of bodies involved in the procurement process. Its effectiveness is open to question in the emerging landscape where Foundation Trusts act independently with no explicit incentive to co-operate. The fragmented system of procurement has produced a great deal of waste, with trusts being charged different prices for the same goods, ordering in inefficient ways and failing to control the range of products which they purchase. The NAO has estimated that trusts could save around £500 million annually, 10% of their consumables expenditure, by amalgamating small orders into larger, less frequent ones, rationalising and standardising product choices and striking committed volume deals across multiple trusts. A lack of data has limited progress towards more efficient procurement and there has not been sufficient control over procurement practices.

**Primary Care Centres**
When you need the NHS, how can you make sure you get the best possible care? Have you ever thought about what you could do to influence and improve the quality of care you receive when using the NHS? Or do you just turn up hoping that the healthcare professional in front of you diagnoses and treats you accurately and in your best interests? Have you ever walked away from an appointment none the wiser, disappointed, confused or angry? Or worse - have you been mis-diagnosed or had unnecessary treatment? The NHS is something we all rely on. We hope that it will deliver the best possible service when we or our loved ones fall ill. It is regarded as a shining example and world leader in healthcare provision, but, in recent years, its reputation has been severely tarnished. Successive scandals have revealed shocking levels of care, harm, neglect, cover-ups and unnecessary deaths. If these multiple revelations have taught us anything it is that we have to be prepared - and able - to take personal responsibility to influence the quality of care we receive. Either we enable ourselves to rise to this challenge or risk becoming another unfortunate statistic. NHS Please Don't Kill Me is a guide to help you receive the best possible care. By outlining the prevalent cultural and behavioural issues, it provides readers with essential skills and ideas that could reduce error and potentially save lives. It is an honest, transparent and factual book that reflects the real experiences of many people, including the authors.

**Nursing in Partnership with Patients and Carers**

Future healthcare services are changing to give patients more rights over their own healthcare. The NMC requires that nurses work in partnership with those in their care. This book provides a timely guide to enabling patient and carer participation in nursing care. It challenges the reader to see the person in the patient and explores the nature of the nurse-patient relationship. It gives practical advice on how students can promote participation on placements and in practice. The book also offers an insight into the realities of being a carer, and discusses how quality of patient experiences can be assessed.

**Smart Health Choices**

Primary Care Centres explores the process of planning and designing buildings for frontline medical practice. Taking as a starting point the concept that good design contributes directly to healthy living, the book shows beneficial effects that a good design brief can bring to the staff, patients and visitors of health care facilities. It outlines principles for designs that are both practical and useful. International case studies of healthcare facilities in the UK, US, Japan and South Africa provide technical detail and give best practice examples of well-designed healthy living centres, with an emphasis on building performance and catering for the latest government policy developments. This new edition provides trusted guidance on investing in effective architecture for architects and project managers involved in the design of healthcare facilities. Dr Geoffrey Purves is Chairman of Purves Ash LLP, a firm of Architects in Newcastle upon Tyne. He has held a range of professional appointments with the Royal Institute of British Architects and is an Honorary Research Associate at Durham University.

**Interview Questions and Answers**

The Healthcare Commission is the independent watchdog for England. Its function is to assess and report on the quality and safety of services provide by the NHS and independent sector.
This is the fifth and final annual 'State of Healthcare Report', as the Commission is to be replaced by the Care Quality Commission on 1 April 2009. The report is mainly about the findings for the financial year 2007-08, but it also reflects on the progress that has been made in healthcare over the past five years. The report presents six pictures of the state of healthcare: for mothers; for children and young people; for people with mental health needs; for people with a learning disability; for people needing urgent and hospital care; and of the support offered to enhance people's health and wellbeing in the community. The Commission highlights improvements, with better use and management of resources in the NHS, falling death rates from cancer and heart disease, progress in public health matters such as smoking, a greater attention to safety. Concerns remain, however: a variable picture of quality in maternity services, mental health services and urgent care; commissioning of healthcare; meeting the needs of the more vulnerable in society; children's services; care for older people. Further improvement is needed to ensure that patients really are at the centre of care, are able to make meaningful choices, be fully involved in decisions and have the information they need.

The Language of Patient Feedback

Despite some improvement in theatre utilisation, waiting lists and the length of time which patients have to wait for treatment in Northern Ireland remain the worst in the UK. Using operating theatres to their optimum could directly contribute to their reduction. Following on from a Northern Ireland Audit Office report (HCP 552, session 2002-03; ISBN 0102924333) published in April 2003, the Committee's report examines options for maximising operating theatre capacity and reducing waiting lists; better theatre management and control; and the shortage of theatre staff and the limited availability of beds.

This book makes the case for ‘ordinary’ people to get the health and social care which the state has promised them for over 60 years but which has not been delivered. What is the case for choice? How can choice be made real for the individual? What impact can genuine, individually financially-empowered choice have on effective funding, purchasing, delivery, and outcomes? How can a genuine market grow and thrive? How can the quest for choice include the large numbers of NHS and social care staff on whom success depends? The book urges individual financial empowerment, through a life-long health savings account for all NHS and social services.

Paramedic Interview Questions and Answers

The Human Rights Act is now in force. Any NHS body that acts in a way that is incompatible with the rights set out in the European Convention on Human Rights may be acting unlawfully. This workbook is a personal perspective based on the authors’ experience of health service management and the law. It explains the impact of the Act, raises issues surrounding its implementation, and asks questions about its implications for the future. It has practical exercises to help readers respond to the challenges of the Act, individually or in team sessions. The Human Rights Act and The European Convention on Human Rights are reproduced in full. There is a great deal in the Act that will have subtle implications for how and when health care is provided and for many of the assumptions that are taken for granted.

Understanding and Using Health Experiences

Systematically updated throughout, the 6th edition of this leading text takes the story of health policy to the end of the Blair era and into the early years of the Brown premiership. It offers a clear and thorough introduction to the history of the NHS, its funding and priorities, and to the process of policy making.

Modern Health Care Marketing

The Language of Patient Feedback provides a unique insight into a diverse range of issues
related to healthcare. Through the comprehensive and detailed interrogation of 29 million
words of online patient feedback on the NHS in England, as well as 11 million words of
responses to the feedback from NHS providers, this book: Uses a combination of computer-
assisted and human analysis (Corpus-Assisted Discourse Analysis) to examine the extent to
which characteristics like age and gender result in different types of evaluation. Investigates
why nurses, doctors, dentists and receptionists are associated with very distinct types of
feedback. Demonstrates the ways that NHS staff respond to comments and what this reveals
about underlying institutional ideologies and practices. Concludes with suggestions for key
recommendations that the NHS could act upon to improve the overall level of care it provides,
as well as reflecting on what patient evaluation can actually tell us. The Language of Patient
Feedback is key reading for anyone undertaking research within corpus linguistics, discourse
analysis and health communication.

Now That’s a Good Question!

Research Using IT offers a step-by-step explanation of how to research and how a computer
